POISONERS - prided themselves that the atypicals they PUSHED (mainly clozapine and risperidone) while more dangerous (re diabetes, white corpuscles, etc.) were justified because of reduced side-effects - not that they ever NOTICED any reduction THEMSELVES of course - but there wouldn't have been any anyway - because the tests that "proved" the reduced side-effects were RIGGED....

Normal doses of atypicals went up against huge doses of typical psychotics - so of course the results were biased in favour of the atypicals.... all of which, of course, were dangerous, toxic drugs....

It was all just a BAD PHARMA marketing PLOY....

Clozapine (for one obvious example) had to be monitored with bi-weekly blood tests, appeared to cause dramatic weight gain (related to diabetes - everyone on it was at least pre-diabetic), heart trouble (directly or indirectly), coma if interrupted and not carefully titrated - and DEATH....

He remembered the MANAGER where he worked observing, that - MAYBE IN A HUNDRED YEARS - they'd look BACK on their WORK - PUSHING the MEDS, he meant - as SHEER BARBARITY....

Well, it didn't take a CENTURY....
